## DETAILED ACTION

### *Response to Amendment*

The amendment received 10-25-2005 perfects the applicant's foreign priority date and therefore antedates several references used by the primary examiner in his rejection.

Upon performing a final search, the examiner found a US Patent commonly owned by the applicant and considers it to raise double patenting concerns. Hence the examiner requests that a Terminal Disclaimer be transmitted with the applicant's next response whereupon the examiner will allow the application.

### *Double Patenting*

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

**Claims 2-11 and 14-20** rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-24 of U.S. Patent No. 6,876,747. Although the conflicting claims are not identical, they are not patentably distinct from each other because they claim two different encryption keys which are used in two different wireless networks whereby the user stops using the first key in order to use the second key when performing a handover from said first network to the second network.
